EDUCATION	Completed Diploma in Information Technology Government Polytechnic Mumbai (2021-24) Currently Pursuing B.E Electronics and Computer Science (2024-27) Anjuman-I-Islam's Kalsekar Technical Campus	
PROJECTS	• <u>Online Grocery Website</u> I created an online grocery website using HTML and CSS. It includes features that allow users to add items to their cart and view those items. • <u>Art Website for School</u> Art website for school that includes the syllabus for both primary and secondary standards in art, work experience, and crafts. We designed separate web pages for each standard, where students can access guides to help them create drawings, artworks, and crafts. To make learning easier, I included YouTube videos for reference. Additionally, I integrated JavaScript, allowing users to enter a topic and receive relevant YouTube videos directly on their workspace. • <u>Keylogger and Advanced keylogger</u> 1. Created a keylogger using Python. It records every keystroke the user types and saves the data in a separate file within Visual Studio itself. 2. An advanced keylogger that records every keystroke the user types and automatically sends the data to my Gmail account. This allows me to access the keystroke logs remotely via email. https://github.com/munazzah7/miniproject • <u>Ebook App</u> I created an eBook app using Java for functionality, along with HTML and CSS for design, and JavaScript to make it responsive. I developed the app in Android Studio, ensuring a seamless user experience. Users can sign up and log in to access their accounts, read books within the application, and manage their personal reading list. The app also allows users to add books to their wishlist for easy access and remove them whenever needed. For backend i used Firebase to store user data. • <u>Fake News Detector</u> I Built a Fake News Detection system using Python, Pandas, ML, and NLP, leveraging an existing dataset and integrating it into a user interface where users can input news text from the dataset to receive real-time fake/true classification.	
SKILLS	• HTML, XHTML, CSS, Java Script • Python • Bootstrap • Cloud Computing • Canva
